Water Filtration Systems

Safe and reliable filtered tap water at home and on-the-go

Safe drinking water is essential to the human body. Norit makes this easy with the uFix under-the-sink and aQix countertop water filtration systems featuring our premium H₂OK point-of-use (POU) cartridges. The filter cartridge range provides high-quality, safe and great tasting drinking water using membrane and activated carbon technologies in various configurations. This flexibility allows users to customize the system to meet their specific needs.

Membrane technology in action

The cartridges use hollow fiber membranes with billions of microscopic pores that are small enough to retain harmful waterborne microorganisms such as viruses, bacteria and cysts, but large enough to allow vital minerals through.

The next level in activated carbon

Activated carbon binds contaminants, such as pesticides, medical residues and heavy metals, and removes them if they are present in the drinking water. The Norit H₂OK cartridge range uses a special grade of certified activated carbon for POU applications, which also greatly improves taste and eliminates odor.

Safe and reliable

To avoid the risk of contaminated water passing through the filter long after the expiration date, which exposes users to unnecessary risk, the Norit Filtrix cartridges offer a unique design that will automatically shut off the flow of water to the tap when the cartridge expires.

aQix & ufix

Water Filtration Systems

Norit Filtrix recommends replacing the filter cartridge every six months. The unique quick-connect system makes this very easy to do. The system has a check valve inside, which means that the water supply does not need to be turned off to replace the cartridge.

aQix

The Norit aQix is an attractively designed countertop water filtration system. Place the aQix the next to a sink and connect it to the existing faucet with the supplied materials. The faucet attachment contains a lever, allowing easy switching between filtered and unfiltered water.

aQix Starter Kit

ufix

The Norit uFix is an easy-to-install under-the-sink water filtration system. Install the uFix into any existing cold water line and connect it to the separate drinking water faucet supplied in the kit. This special faucet has a lever that allows you to choose between filtered water from the uFix faucet and unfiltered water from the existing tap.
